

```
#include<iostream>
#include<fstream>
using namespace std;

int main()
{
    ofstream fout;
    char szText[50];

    fout.open("keyboard_to_file.txt");

    if(fout.fail())
    {
        cout << "\nCant Open File\n";
        return -1;
    }

    cout << "\nEnter strings:(Press cntl+z for quit)\n";

    while(cin.getline(szText,50))
    {
        fout << szText << "\n";
    }

    return 0;
}
```
