```cpp
#include<iostream>
#include<fstream>
using namespace std;

int main()
{
    ofstream fout;
    ifstream fin;
    char cCh;

    fin.open("file_copy_source.txt");
    if(fin.fail())
    {
        cout << "\nCant Open Source File\n";
        return -1;
    }

    fout.open("file_copy_destination.txt");
    if(fout.fail())
    {
        cout << "\nCant Open destination File\n";
        fin.close();
        return -1;
    }

    /*
    while(fin.get(cCh))
    {
        fout.put(cCh);
    }
    */

    fout << fin.rdbuf();

    cout<<"\nCopied Successfully\n";

    return 0;
}
```
