```cpp
#include<iostream>
#include<fstream>
using namespace std;

int main()
{
    ifstream fin;

    struct student
    {
        char szName[40];
        int iRollNo;
        float fPerc;
    };

    student s;

    fin.open("student_structure_from_file_to_screen.txt");

    if(fin.fail())
    {
        cout << "\nCant Open File\n";
        return -1;
    }

    /*
    while(fin >> s.szName >> s.iRollNo >> s.fPerc)
        cout << "\t" << s.szName << "\t" << s.iRollNo << "\t" << s.fPerc << "\n";
    */

    char szText[26];
    fin.read(szText,26);
    cout.write(szText,26);

    return 0;
}
```
